This sensory garden space in the Key Stage 2 yard was designed to support the emotional wellbeing of all children. It gives our children a calm space to be creative explorers and was designed to stimulate their senses of sight, sound, smell, taste, and touch through plants and sensory pathways. The children will be able to grow plants in the raised beds and access a variety of equipment at playtimes and lunchtimes.

The outside space around the Acorn Hub has been creatively developed to promote mindfulness, build resilience and support emotional regulation. Whilst the area will be used as a specific intervention space, all children will have opportunities to access the area through timetabled sessions over the course of each half-term. A truly amazing space for all of our children to enjoy!
