

What Parents & Educators Need to Know about WORRY AND ANXIETY

Worry and anxiety are common emotions experienced by children, often triggered by uncertainty or fear. While worry involves concern about future events, anxiety is a persistent feeling of dread or apprehension. Current statistics indicate a rising prevalence of anxiety disorders among children, and this guide has some expert advice on understanding and addressing these concerns.

UNDERSTANDING WORRY AND ANXIETY

Worry and anxiety are emotional responses to stress or uncertainty. Worry is typically associated with potential misfortune, while anxiety is characterised by feelings of fear, apprehension or unease. Both can manifest physically through symptoms such as restlessness, fatigue or muscle tension. Understanding the distinction between worry and anxiety is crucial for effectively addressing these concerns in children.

DIFFERENTIATING WORRY FROM ANXIETY

While worry and anxiety share similarities – in that they both involve concerns about possible trouble – anxiety tends to be more constant and overwhelming. Worry may come and go depending on circumstances, whereas anxiety can linger regardless of the situation. It's essential to recognise when the former crosses into the latter, as anxiety can significantly impact a child's daily functioning and wellbeing.

WHAT ARE THE RISKS?

LONG-TERM CONSEQUENCES

Untreated worry and anxiety in childhood can have potentially lifelong impacts on a person's mental health and wellbeing. Chronic anxiety may increase the risk of developing anxiety disorders, depression or other mental health conditions later in life. Additionally, unresolved worry and anxiety can negatively impact self-esteem, confidence and overall resilience. It's essential to address these concerns proactively and provide appropriate support and intervention.

THE IMPACT ON CHILDREN

Excessive worry and anxiety can have profound effects on children's mental and emotional health. It may interfere with their ability to concentrate, sleep or participate in daily activities. Chronic worry and anxiety can also lead to physical symptoms such as headaches, stomach aches or difficulty breathing. Left unchecked, these concerns can escalate and potentially contribute to the development of anxiety disorders later in life.

THE EMOTIONAL TOLL

The emotional impact of worry and anxiety on children can be significant, affecting their overall quality of life and wellbeing. Children experiencing chronic worry or anxiety may feel overwhelmed, irritable or helpless. They may also withdraw from social activities or avoid situations that trigger their anxiety, leading to feelings of isolation or loneliness. Addressing these concerns early can help prevent long-term emotional distress and promote healthy coping strategies.

ACADEMIC & SOCIAL IMPACTS

Impacts on the academic performance and social interactions of children and young people are very possible. Frequent worry or anxiety may impair concentration, memory and problem-solving skills, making it difficult for children to succeed in education. Anxiety can also hinder social development by causing children and young people to avoid social situations or to struggle with communication and interpersonal relationships, potentially leading to feelings of isolation or exclusion.

Advice for Parents & Educators

ENCOURAGE OPEN COMMUNICATION

Parents and educators can foster a supportive environment by encouraging children to express their worries and anxieties openly. Actively listening and acknowledging young people's emotions can help them feel understood and supported, reducing the situation's intensity. Creating opportunities for regular check-ins and discussions about one's feelings can promote healthy coping strategies and strengthen communication bonds.

CREATE A SUPPORTIVE ENVIRONMENT

Parents and educators play a crucial role in creating a supportive environment that promotes emotional wellbeing. Establishing routines, providing predictability and offering reassurance can help relieve anxiety and create a sense of security for children. Foster a culture of empathy and understanding, where children feel safe enough to express their emotions and seek support when needed.

TEACH COPING STRATEGIES

Empowering children with effective coping strategies is essential for managing worry and anxiety. Encourage the use of relaxation techniques such as deep breathing, mindfulness or progressive muscle relaxation to calm anxious thoughts and promote a sense of composure. Additionally, teaching positive self-talk and problem-solving skills can help children develop resilience and confidence in managing challenging situations.

SEEK PROFESSIONAL HELP

Recognising when to seek professional help is vital for addressing significant or persistent worry and anxiety in children. If worry or anxiety significantly impacts a child's daily functioning, interferes with their relationships or academic performance, or causes significant distress, it may be necessary to consult with a mental health practitioner. Early intervention can prevent long-term consequences and promote positive outcomes for children's psychological wellbeing.
